Wallmob POS Release Notes

Version 2.27

Written by

Bjørn Willoch Bjanger, Product owner

Contents in release

2.27

This version lets you apply more than one giftcard in one bill, as long they are all not connected to specific products (pure gift cards).

You can now log in to POS using a subuser created in Wallmob backoffice. This means that not all users of Wallmob need to know the masteruser password, but can still access POS.

We now launch a major new feature, shared bills, meaning you can park bills and share them between POSes and KDSes in the same shop.

Bankaxept cards are now reported explicitly in the sales reports, up until now they have been reported as Unknown card.

We have added new drivers for Star and Epson printers, in addition to many improvements and some bugfixes

API version needed for this version

This POS version requires API version 2.19.6.2
